SUMMARY

Software Engineer with **6+** years of experience building scalable enterprise applications in the **public sector**. Skilled in full-stack development using **Java**, **Angular**, and **SQL** with experience modernizing legacy systems and developing **responsive**, **reusable UI components** integrated with **RESTful APIs** and **backend services**. Experienced in building **microservices-based applications**, **systems integration**, and **data processing solutions**, with hands-on experience integrating **AWS** cloud services.

SKILLS

- **Languages:** Java, TypeScript, SQL
- **Backend:** Spring Boot, RESTful APIs, Microservices, Java EE (EJB)
- **Messaging & Streaming:** JMS, Kafka (working knowledge)
- **Frontend:** Angular, HTML, SCSS
- **Databases:** MySQL, PostgreSQL
- **Cloud & DevOps:** AWS (S3, EC2, SNS, SES, ECR), Docker, Kubernetes, Jenkins
- **Testing:** JUnit, Mockito
- **Tools & Methodologies:** Git, Agile, Scrum

PROFESSIONAL EXPERIENCE

IT Analyst/Developer (CS 02) **July 2022 - Present**

Canada Revenue Agency, Mississauga, ON

- Led modernization of a legacy system from COBOL to **Java (EJB)** and **Angular-based architecture**, contributing to **application design**, **backend services**, and **systems integration**.
- Developed a **reusable internal Angular component library** for MODUS, including single-select and multi-select dropdowns, alert dialogs, preview panels, tables, and other shared UI components, reducing UI development effort by **~15%** and improving consistency across the application.
- Built an internal **Java** application to automate parsing and transformation of Excel data into COBOL-compatible CSV, enabling secure transfer via **FTPS to PostgreSQL**.
- Wrote **SQL** scripts to fix over **10,000** rows of production data across multiple environments, directly improving data integrity and operational reliability.
- Delivered core features for Decisions and Review Tracking System for CRA by integrating front-end modules with **RESTful APIs,** improving case resolution efficiency by **~75% (4 to 7 cases/day).**
- Developed front-end and back-end components for **MODUS Record Dates** by **analyzing OCI integrations**, mapping manual and automatic dates to database tables, and identifying employee profile ID requirements - consolidating all recorded dates into a single reviewable screen for users.
- Implemented **asynchronous data processing** using **message-driven architecture (EJB/JMS)** for efficient handling of case-related data.
- Acted as **interim lead** for 2.5 months, coordinating cross-team efforts, conducting code reviews, and mentoring junior developers.

IT Analyst/Developer (CS 01) **July 2021 - July 2022**

Canada Revenue Agency, Mississauga, ON

- Developed and maintained application modules using **Angular** and **Java-based backend services**, contributing to end-to-end feature delivery.
- Designed and implemented a reusable backend solution to filter expired codes (DB entries), improving **data consistency** and **preventing synchronization issues** across different DB environments.
- Applied **design patterns** (e.g., Builder) to improve code maintainability, reduce complexity, and enhance reusability.
- Supported **CI/CD deployments** through **Jenkins** pipelines and participated in release validation, defect triage, and post-implementation support.
- Provided production support by resolving **15+** incidents per month across two sprints, conducting root cause analysis, and implementing fixes, reducing recurring issues by **~17%.**

IT Developer (Co-op) **January 2020 - April 2020**

Canada Revenue Agency, Summerside, P.E.I

- Developed scalable and robust enterprise applications in **J2EE and Swing** for generating letters for Canadian taxpayers.
- Designed software solutions that improved user experience by **~10%.**
- Refactored code using **software design principles** and **patterns** to improve maintainability and code quality.

EDUCATION

- **Master of Applied Computer Science** **May 2020**
  Dalhousie University, Halifax, Nova Scotia
- **Bachelor of Computer Science and Engineering** **June 2017**
  Gujarat Technological University, India

PROJECTS

Modus – Appeals Modernization Project **July 2021 - Present**

Angular 20+, TypeScript, RxJS, Java EE, Jenkins, MySQL

- Enterprise modernization initiative focused on modernizing the Appeals systems replacing a legacy COBOL system with a modular, maintainable web application supporting CRA business operations.
- Built as a distributed application with an Angular micro-frontend, reusable presentation components, Java-based services, REST API integration, and database persistence.
- Designed to support independent feature development, consistent user experiences, bilingual functionality, scalable application modules, and long-term maintainability.
- Contributed to the project throughout CS-01 and CS-02 assignments, spanning development, testing, deployment, production support, and technical leadership responsibilities.

ACHIEVEMENT

- Selected for the **Public Service Data/AI Challenge** (2026-2027) for proposing **BenefitBridge AI**, an AI-powered eligibility copilot designed to help Canadians discover potentially relevant government benefits and services based on their individual life circumstances.
